The horse series is often presented as proof of evolution. The number of toes in foreleg and hindleg supposedly decreased as the horse evolved, and the size supposedly increased from a small dog-like horse to a large modern horse. Yet three-toed horses have been found with one-toed horses, showing they lived at the same time.

What's Happened to the Horse? | Answers in Genesis

Favourite answer That's just the domestication of the horse. The evolution of what we'd call a horse began with galloping creatures which still had 5 toes (now its down to one) something like 100,000,000 years ago - they were the size of dogs and got chased and eaten by giant flightless birds.

### Evolution Of The Horse Answers

Created to support the teaching of evolution and inheritance at primary level, this resource contains an animation in which two children go back millions of years to look at the ancestors of the horse. The children observe and discuss the changes that happened as this animal evolved over many generations. A second animation looks at the how the ...

### Evolution of the Horse | STEM

Domesticated about 3,000 years ago, the horse had a profound impact on human history in areas such as migration, farming, warfare, sport, communication, and travel. Species of Equus lived from 5 million years ago until the present. Living species include horses, asses, and zebras.

### Horse Evolution Over 55 Million Years

Evolution of the horse over the past 55 million years. The present-day Przewalski's horse is believed to be the only remaining example of a wild horse—i.e., the last remaining modern horse to have evolved by natural selection. Numbered bones in the forefoot illustrations trace the gradual transition from a four-toed to a one-toed animal.

### Horse - Evolution of the horse | Britannica

The evolution of the horse, a mammal of the family Equidae, occurred over a geologic time scale of 50 million years, transforming the small, dog-sized, forest-dwelling Eohippus into the modern horse. Paleozoologists have been able to piece together a more complete outline of the evolutionary lineage of the modern horse than of any other animal. Much of this evolution took place in North America, where horses originated but became extinct about 10,000 years ago.

### Evolution of the horse - Wikipedia

According to the theory of evolution, it is possible to follow horse evolution through millions of years: how the horse slowly became larger and stronger (figure 1), lost many of its toes (figure 2), and how its tooth-structure changed when it moved from a diet of broad-leaved plants, shrubs and trees (browsing) to eating hard, dry grass (grazing) (figure 3). 3,4 Horse evolution is believed to have been driven by a cooling and drying climate. Early horses supposedly lived in humid forests ...

### The evolution of the horse - creation.com

As horses evolved, they increased in size and lost all but one of their toes on each foot. The earliest horse was the dawn horse (Hyracotherium or Eohippus). Przewalski's horse, a subspecies of the modern horse, is believed to be the last surviving horse to have evolved through natural selection rather than through domestication by humans.
