~~Marine Cooling Systems | Intakes, Pumps, Hoses ...~~

□ Although there is an abundance of free sea water available, marine diesel engines do not use it directly to keep the hottest parts of the engine cool. This is because of the corrosion which would be caused in the cooling water spaces, and the salts which would be deposited on the cooling surfaces interfering with the heat flow.

~~Marine Closed "Freshwater" Cooling Systems~~

Most newer marine engines use an enclosed cooling system. This means that there is a small tank on the top of the engine that uses a combination of fresh water and coolant. This fresh water is circulated through the engine and through a heat exchanger. The fresh water, in this system, absorbs the heat of the engine.

~~Engine Cooling Systems Explained – Boat Safe~~

Fresh water & Sea water Cooling System for Marine Diesel Engine. Cooling of engines is achieved by circulating a cooling liquid around internal passages within the engine. The cooling liquid is thus heated up and is in turn cooled by a sea water circulated cooler. Without adequate cooling certain parts of the engine which are exposed to very ...

Marine Engines 4 Less encourages our customers who use their boats in a brackish or salt water environment to strongly consider installing a freshwater cooling system on their engines. Utilizing a closed cooling (freshwater cooling) system on your engine reduces corrosion that salt water creates on the engine.

~~Freshwater Kits :: Volvo Penta - Marine Engines 4 Less~~

1. Raw Water Cooling Systems. This style sucks the salt-water straight out of the ocean, through a strainer (filter), and then cycles it through your engine block. Water is then usually exited through the exhaust and out the back, or below the boat. 2. Closed Loop Cooling Systems. There are a number
