Area imaged. General Technique and Tips. Lower PM and M. Place film in vestibule between the tongue and teeth. The beam is angled perpendicular to film. This is the only parallel technique. Lower incisors +/- Canine. Start by aiming beam on ventral midline perpendicular to the film.

Simplified Positioning for Dental Radiology - Dentalaire ...

1. The patient is positioned in lateral recumbency with the affected limb up. This is very different from lateral positioning for other joints or bones. The down limb is pulled perpendicular to the body, while the limb of interest is extended cranially in full extension and secured to the table (FIGURE 30).

Radiographic Positioning: Head, Shoulders, Knees, & Toes ...

Veterinary X-rays was formed in 1960. Pat Dorrell, a radiographer, who worked for the x-ray division of what became GEC, recognised a growing trend for vets to have an in house x-ray facility. He suggested the idea for a division of GEC, but the company considered that it was far too small a market for GEC to be concerned with.

When I moved to working on dental imaging in the veterinary sector, I could not believe that size 2 sensors were being used in dogs and even cats. I had problems getting the sensors in human mouths as they were designed for bitewings (Figure 1), meaning positioning or even placing the sensor for full mouth radiographs in cats and dogs was going to be very difficult.
